Formulating success is our business.

Our aim is to assist you in becoming even more successful. Success in the cosmetics industry depends decisively on innovative formulations and technical solutions. We offer innovative ingredients and tailor-made solutions to make your products better. We provide you with high-end formulation expertise and technical support for your specific formulation needs. Based on our regulatory expertise we strive to give you the support to better meet the changing regulatory and ecological challenges. We show our commitment to the cosmetic industry with scientific studies in various areas. Our integrated system – with international production sites, a dense distribution network and effective logistical chains – gives us the edge when it comes to reliability. We deliver what we promise. A global presence with local support structures gives us both the breadth of vision and the local focus to respond flexibly to your requirements.

Our formula for success is innovation, technology, reliability.

Simply sharing cosmetic solutions.

styling and conditioning
Our extensive product range, encompassing old favorites, intelligent improvements and the latest innovative styling polymers, demonstrates how we have moved with the times over the past 50 years and beyond. Hairsprays for ultra strong hold, styling mousses for more volume and flexibility, or shampoo conditioners that give a really smooth and silky feel: BASF offers you the right styling polymer for virtually all applications to meet your customers’ requirements.
BASF offers the most extensive range of polymers for hairstyling. It is the result of a long-term commitment, high competence and strong R & D efforts for this segment in the cosmetic industry. There is hardly any hairstyling product which cannot be formulated by using one or several products of this broad range.

To make the choice as simple as possible the following guidelines can be used to find the best polymer for a desired application:

### Gels

</tbody>
</table>

*Lcontains preservative

General: Luviskol K products are mainly used as film formers, but also as thickeners. The molecular weight determines the setting and adhesive properties of PVP polymers; the higher the molecular weight, the greater the setting. They are ideal for use in water-based applications where a high degree of clarity is required in the finished product (e.g. gels). For hair-styling applications K 30, K 80, K 85 and K 90 are the best of the various molecular weights.

Properties: 
- Water-soluble in high concentrations to form clear solutions
- At low relative humidity the films are hard and brittle; at high relative humidity they are elastic and soft
- High water-absorption capacity
- Non-ionic, no neutralization required. Compatible with anionic and cationic ingredients

Applications: 
- Hair gels, in particular wetlook gels, hair mousses, pump sprays, liquid hair setting preparations
- Luviskol K 30: for products with normal hold, for which low viscosity is important (e.g. pump sprays)
- Luviskol K 90: for products with a strong hold and high viscosity (e.g. hair gels and hair mousses)
- For products where lower tack and better curl retention are desired, Luviset Clear is particularly suitable
Luviskol VA Grades

Chemical description: Copolymers of vinylpyrrolidone (VP) and vinyl acetate (VA)

INCI|CAS: VP/VA Copolymer | 25086-89-9

Appearance:

- 50 % solutions in ethanol
  - Luviskol VA 37 E (30:70)*
  - Luviskol VA 73 E (70:30)*

- 50 % solutions in isopropanol
  - Luviskol VA 37 I (30:70)*
  - Luviskol VA 55 I (50:50)*

- 50 % solutions in water
  - Luviskol VA 64 W (60:40)*
  - Luviskol VA 73 W (70:30)*

- Free-flowing powder
  - Luviskol VA 64 P (60:40)*
  *VP:VA ratio, % by weight

General:
Versatile film-formers for formulating hairstyling products. Properties and differentiation are determined by the VP/VA ratio in the polymer. The series includes alcoholic (ethanol, isopropanol), aqueous and powder products.

Properties:
- Non-ionic, no neutralization required
- Compatible with ionic (anionic as well as cationic) additives
- Ranging from water-soluble to soluble in ethanol
- Easy to handle
- Easy to comb out
- Propane/butane compatibility 20 – 45 %
- DME compatibility up to 70 %

Applications:
All important hair styling applications, such as aerosol sprays (VA 37), pump sprays, setting lotions (all Luviskol VA grades), mousses and gels (mainly Luviskol VA 64/VA 73).

Luviset Clear + Luviset Clear E

**Chemical description:** Luviset Clear is a copolymer of N-vinylpyrrolidone, methacrylamide and N-vinyl imidazole

**INCI|CAS:** VP/Methacrylamide/Vinyl Imidazole Copolymer | 38139-93-4

**Appearance:**
- Luviset Clear: Solution of approx. 20% polymer in water stabilized with 0.75% Phenonip.
- Luviset Clear E: Solution of approx. 20% polymer in water and 15–18% ethanol, no preservative.

**General:** Luviset Clear is a non-ionic, high performance hair setting polymer for brilliantly clear gels, mousses, styling lotions and alternative styling aids. Very low tackiness, excellent humidity resistance, strong setting properties combined with the ability to formulate brilliantly clear Carbomer gels make Luviset Clear the number one choice for high performing transparent styling aids.

**Properties:**
- Brilliantly clear gels can be achieved by using e.g. Acrylates/C10 – C30 Alkyl Acrylate Crosspolymer (Ultrez 21, Noveon), Acrylates Beheneth-25 Methacrylate Copolymer (Aculyn 28, Rohm & Haas)
- Furthermore compatible with almost every commercially available cosmetic thickener
- Strongest hold
- Excellent humidity resistance
- Very low tackiness
- Very good curl retention
- Can be excellently combined with PVP and PVP/VA grades

**Applications:** Hair gels and mousses

**Comparison of stiffness test results**

(65% rel. hum., 3% styling polymer in 0.5% Ultrez 21 gel)

- **Luviskol K 30 (PVP)**
- **Luviskol K 90 (PVP)**
- **Luviset Clear**

Figure shows a comparison of stiffness test results. The high levels for Luviset Clear reflect its even better holding power compared with our tried and tested Luviskol K 30 and Luviskol K 90 styling polymers.
Luvimer Grades

Chemical description: Terpolymer of tert.-butyl acrylate, ethyl acrylate and methacrylic acid

INCI|CAS: Acrylates Copolymer | 159666-35-0

Appearance: Luvimer 100 P: White powder
Luvimer 30 E: 30 % solution in ethanol
Luvimer Pro55: 37 % dispersion in water

General: Luvimer products have been developed specifically for modern, good-value and strong-hold formulations. At 100 % neutralization they are completely soluble in water.

Properties:  
- Strong to extra strong setting
- Long lasting hold, i.e. very good curl retention
- Clear solution in water at 100 % neutralization
- High performance
- Excellent odor profile

Applications:

Luvimer Pro55 is our new acrylate-based, low-viscosity, water-compatible styling polymer created especially for producing 55 %-VOC formulations. It provides long-lasting hold and outstanding curl retention in combination with excellent sprayability and can be used for volumizing, styling, or finishing sprays. When neutralized, Luvimer Pro55 is an easy-to-use, low odor liquid that produces clear and colorless 55 %-VOC formulations. For formulations containing more than 55 % VOC, we recommend our well-known high-performance Luvimer 100 P.
Setting Polymers

Ultrahold Grades

Chemical description: Terpolymer of acrylic acid, ethyl acrylate and N-tert.-butylacrylamide

INCI|CAS: Acrylates/t-Butylacrylamide Copolymer | 26062-56-6

Appearance:

Ultrahold 8:
White powder

Ultrahold Strong:
White powder

General:
Ultrahold 8 and Strong are acrylate polymers with excellent application properties.
Ultrahold 8 and Strong differ in molecular weight and acid value. The higher molecular weight of Ultrahold Strong improves the setting effect. A higher acid value ensures water-compatibility and excellent wash-out properties.

Properties:
- High curl retention
- No tack of the film, even at high relative humidity
- Exceptionally high propane/butane compatibility. Ultrahold 8 is compatible with propane/butane up to 60 %, Ultrahold Strong up to appr. 50 %.
- Combination with other polymers (preferably non-ionic ones) is possible, e.g. Ultrahold Strong with Luviskol VA 37 grades for hair sprays which have strong hold and additional elasticity.

Applications:
Aerosol and pump hair sprays, lotions, mousses

## Luviset Shape

**Chemical description:**
Luviset Shape is a Methyl methacrylate, Methacrylic acid, Acrylic acid, Urethane-Acrylate Copolymer

**INCI|CAS:**
Polyacrylate-22 | 39332-53-1

**Appearance:**
Luviset Shape is supplied as a pre-neutralized polymer in a water/ethanol solution. It is easy-to-use and contains no preservatives.

**General:**
Luviset Shape is a unique styling polymer specifically developed for fast drying, non-tacky, aqueous based hair sprays providing long-lasting crunchy hold.

Luviset Shape has outstanding sprayability characteristics generating a fine spray pattern which produces no foam or beading on the hair.

This property makes Luviset Shape an excellent choice for low VOC formulations with high water content.

**Properties:**
- Long-lasting crunchy hold even under the most humid conditions
- Non-tacky feel during application and after drying
- Fast drying, non-foaming fine spray designed for high water content formulas
- Excellent performance in the 35 – 80 % VOC range

**Applications:**
Low VOC hair spray formulations
*Polymer 2 = Octylacrylamide / Acrylates / Butylaminoethyl Methacrylate Copolymer
Polymer 3 = Acrylates / Hydroxyesters Acrylates Copolymer
Polymer 4 = Diglycol / CHDM / Isophthalates / SIP Copolymer
Polymer 5 = Acrylates Copolymer
Polymer 6 = Octylacrylamide / Acrylates / Butylaminoethyl Methacrylate Copolymer
Luviset P.U.R.

Chemical description: Based on polyurethane, ethanol, water

INCI|CAS: Polyurethane-1 | 208054-84-6

Appearance: Clear liquid to slightly turbid liquid (30 % polymer, 10 % ethanol, 60 % water)

General: Luviset P.U.R. is the first cosmetic polymer on polyurethane basis and has especially been designed for water-based hair sprays (VOC 55 sprays), but is also suitable in conventional hair spray formulations (VOC 80/90) or “water-free” formulations. It allows the formulation of water-containing hair sprays – avoiding or minimizing the negative effects of water.

Properties:
- Low viscosity and excellent spray pattern even at high polymer concentrations (up to 12 % solids, „High Solids Concept“)
- Long-lasting curl retention and excellent hold
- Outstanding elasticity for bouncy and flexible hair
- No tack on the hair during and after drying
- Already neutralized (100 %) with AMP

Applications: Low and regular VOC aerosol and pump sprays, lotions

![Viscosity vs. polymer concentration](chart)

- Polyurethane-1 (Luviset P.U.R.)
- Polyvinylcaprolactam
- Conventional “Acrylates Copolymer”
Luviflex Silk

Chemical description: Terpolymer of tert.-butyl acrylate, methacrylic acid and dimethicone copolyol

INCI/CAS: PEG/PPG-25/25 Dimethicone/Acrylates Copolymer | 248935-80-0

Appearance: Colorless to faint yellow, clear to slightly opalescent, approx. 50% solution in ethanol

General: Luviflex Silk is a unique styling polymer that gives hair a bouncy and silky feel. It is supplied as a colorless to slightly yellowish, clear ethanolic solution (50%) with a characteristic low odor. It has been developed especially for hairsprays with little or no water content (80% VOC up to “100% VOC”). The unique chemical/physical character gives this polymer outstanding sensoric properties, such as a soft, silky feel of the hair, an exceptional combability and provides a natural, flexible hold.

Properties:
- Smooth, silky and bouncy feel
- Exceptional combability
- Polymer already contains a silicone component
- Excellent natural and non-sticky hold
- Long-lasting curl retention
- Natural styling
- Flexibility

Applications: Aerosol and pump hair sprays, lotions

# Luviset CA 66 and CAN

## Chemical description:
- **Luviset CA 66:** Copolymer based on vinyl acetate and crotonic acid  
- **Luviset CAN:** Terpolymer based on vinyl acetate, crotonic acid and vinyl neodecanoate

## INCI|CAS:
- **Luviset CA 66:** VA/Crotonates Copolymer | 25609-89-6  
- **Luviset CAN:** VA/Crotonates/Vinyl Neodecanoate Copolymer | 55353-21-4

## Appearance:
- **Luviset CA 66:** White powder  
- **Luviset CAN:** Fine, free flowing transparent beads

## General:
Luviset CA 66 and CAN are based on vinylacetate (VA) and crotonic acid providing a reasonable setting effect.

## Properties:
- ☑️ Good hold  
- ☑️ Curl retention depending on degree of neutralisation

When formulating aerosol sprays with Luviset CA 66, dimethyl ether should be used as propellant, because compatibility with propane/butane is limited.  
Luviset CAN has a better hydrocarbon compatibility. Formulations with 20–30 % propane/butane are possible.  
Both products can be combined with other polymers in order to modify the properties of the hair styling preparation as desired.

## Applications:
- Aerosol and pump sprays

---

### Curl retention of Luviset CAN as a function of the degree of neutralisation (25 °C; 90 % r.h.; 2 % solids)

![Curl retention graph](image)
Luviskol Plus

Chemical description: Homopolymer of vinylcaprolactam

INCl|CAS: Polyvinylcaprolactam | 25189-83-7

Appearance: 40 % solution in ethanol

General: Luviskol Plus is a film-former for hair styling with an extremely high hydrocarbon compatibility

Properties:
- Excellent curl retention; and therefore long lasting hold even at high relative humidity
- Strong hold
- Excellent odor profile, i.e. almost no intrinsic odor
- Simple handling; the non-ionic polymer does not require neutralization
- Broad formulation spectrum; both for nonaqueous and aqueous hair sprays
- Extremely high compatibility with propellants, in particular propane and butane

Applications: Hair styling products, in particular aerosol sprays (inc. 55 % VOC), pump sprays and setting lotions.
# Luviflex Soft

<table>

<td>CAS:**</td>
</tr>
<tr>
<td><strong>Appearance:</strong></td>
<td>Milky-white liquid, 30% dispersion in water</td>
</tr>
<tr>
<td><strong>General:</strong></td>
<td>Luviflex Soft is an anionic polymer for hair styling mousses. It is supplied as a 30% dispersion in water. It is a film-forming agent that gives the hair volume, a particularly soft feel and good dry combability, together with a certain degree of hold. Compared with other polymers commonly used in hair mousses, Luviflex Soft provides a much better curl retention with no tack.</td>
</tr>
<tr>
<td><strong>Properties:</strong></td>

</table>
**Luviquat Supreme**

**Chemical description:** Quaternized copolymers of vinylpyrrolidone (VP), methacrylamide (MAM), vinylimidazole (VI) and quaternized vinylimidazole (QVI).

**INCI|CAS:** Polyquaternium-68 | 827346-45-2

**Appearance:** Solution of 20% polymer in water; contains preservative. Clear to slightly yellowish viscous liquid.

**General:** Luviquat Supreme is an innovative styling polymer for hair mousse. It provides ultra strong hold and outstanding curl retention even at high humidity levels. In addition, Luviquat Supreme has impressive conditioning properties and gives even the finest hair more volume. Another highlight is the combination of Luviquat Supreme and panthenol. The result is a highly flexible polymer film with a tremendous resistance to breaking that ensures a natural, flexible hold regardless of the weather. In comparative studies of styling polymers currently used in hair mousse, Polyquaternium-11 or Polyquaternium-4 for instance, Luviquat Supreme comes out on top. Replacing Polyquaternium-11 with Luviquat Supreme saves 25% of the amount of polymer required without losing any stiffening effect.

**Properties:**
- Maximum setting even in the most extreme conditions
- Strong hold all the way to natural, flexible hold with additives
- Excellent curl retention
- Very low tackiness
- Quick foam development
- Rich and creamy foam
- Hair that feels smooth
- Improves combability
- Increased volume for fine hair
- Easy solubility in water
- Combines styling and conditioning properties

**Hair setting**
Luviquat Supreme, Luviquat Hold, Luviquat PQ 11 PN and Luviquat Style are especially recommended for styling products, e.g. hair mousses and lotions. Their high molecular weight and their specific composition provide a good setting effect.

**Setting effect** (Stiffness test, 2.2% polymer content, 65% rel. hum./25 °C)

**Curl retention**
Luviquat Supreme exhibits highest curl retention values even at 90% rel. hum.

**Cut retention at 90% rel. hum./25 °C**
The memory effect of Luviquat Supreme in combination with panthenol: After elongation, the polymer film containing Luviquat Supreme and panthenol contracts within minutes and tries to regain its original form. In spite of the enormous elasticity, the polymer film still provides ultra strong hold and outstanding curl retention. This memory effect can be demonstrated particularly well on blow dried hair.

**Applications:**

Aerosol mousses, pump mousses.

*contains preservative

General: The Luviquat products are substantive cationic compounds.

Properties:

Hair care
- Improvement of wet combability
- Prevention of electrostatic charging
- Additional protection by means of coating the hair, reducing damage of the surface of the hair
- Volume and hold

The technical properties of the individual Luviquat products are influenced by their molecular weight and their cationic activity.

A high molecular weight increases not only the viscosity in the solution (advantageous for hair mousse and shampoos), but also gives good hold. Luviquat PQ 11 PN, Luviquat Hold and Luviquat Style are thus preferentially used in products where, in addition to the conditioning effect, a strong setting effect is also desired. The setting effect can even exceed that of traditional hair spray polymers, so that Luviquat Hold and Luviquat PQ 11 PN can be used to formulate pump sprays having excellent setting and good conditioning effects.

The cationic activity influences conditioning (wet combability) and compatibility with anionic products, e.g. with carbomers. In view of its low cationic activity, Luviquat Hold is also suitable for hair gels, giving transparent gels with a good conditioning effect.
Properties:

Luviquat UltraCare is an effective conditioning polymer for shampoos, cleansing products and skin care formulations. Its outstanding features in shampoo conditioning are:

- Excellent wet and dry hair combability
- No build-up
- Smooth feel of the hair
- Brilliantly clear shampoo formulations
- Counter irritancy
- Rich lather creaminess

Comparison of conditioning and setting effects
Skin care:
Luviquat UltraCare and Luviquat Style are additionally recommended for skin care. They are substantive to the skin and are able to improve the overall performance of skin care formulations:
- Impart smooth and supple feel of the skin
- Increase the moisture content of the skin
- Improve the lather creaminess in cleansing formulas
- Reduce the irritation potential of surfactants (Luviquat UltraCare)

Applications:

Hair care
The Luviquat grades are recommended for use in conditioners, shampoos, hair-setting products, hair rinses, perms, bleaches, and colorants.

Skin care
Luviquat UltraCare and Luviquat Style are recommended for emulsions, creams, lotions, and provide skin smoothness and moisturization. Luviquat UltraCare is especially recommended for all surfactant based cleansing formulations like body washes and shower gels where it improves the skin feel and acts as an efficient counter-irritant.

Monoquats

Uvinul A Plus

INCI|CAS: Diethylamino Hydroxybenzoyl Hexyl Benzoate | 302776-68-7

Appearance: Yellow melt that crystallizes

Properties:
- Especially recommended for high UVA protection
- High performance against UV induced free radicals formation
- Efficient protection against longwave UV irradiation (UVA-I)
- High absorptivity
- Outstanding photostability
- Excellent formulation flexibility
- Good compatibility with cosmetic ingredients
- Soluble in a wide range of cosmetic oils and alcohol

Applications: Skin and sun care products

**Uvinul A Plus – simply photostable**
UVA-performance (354 nm) after 120 min. irradiation

**Number of free radicals generated by different irradiation times and doses in protected and unprotected skin biopsies**

- Blank no product
- Product without UV filter
- 6.5% Uvinul MC 80
- 3.5% Z-COTE HP 1
- 3.5% Uvinul A Plus
- 10% Uvinul A Plus B

Total filter concentration 5%, Eq. = Equivalents to UVA filter (Ratio); irradiation with Atlas SUNTEST
Uvinul A Plus B

INCI/CAS:
Ethylhexyl Methoxycinnamate | 5466-77-3 (and)
Diethylamino Hydroxybenzoyl Hexyl Benzoate | 302776-68-7

Appearance:
Yellow liquid

General:
Min. 35 % – max. 37 % solution of Uvinul A Plus in Uvinul MC 80
Should be kept above 22 ºC to avoid crystallization

Properties:
- Easy to handle
- Miscible in a wide range of cosmetic oils and solvents
- Efficient protection against long wave UVA radiation and UVB light
- Broad-spectrum protection

Applications:
Skin and sun care products

![Uvinul A Plus broadband spectrum](image-url)
# Uvinul M 40

**INCI|CAS:** Benzophenone-3 | 131-57-7

**Appearance:** Light yellow powder

**Properties:**
- Broadband UV absorption
- High photostability
- SPF boosting
- World-wide approved

**Applications:** Skin, sun care products and product protection

---

# Uvinul MS 40

**INCI|CAS:** Benzophenone-4 | 4065-45-6

**Appearance:** Off white fine powder

**General:** Water-soluble UV absorber

**Properties:**
- World-wide approved
- Broadband UV absorption

**Applications:** Skin, sun care products and product protection
UVB Absorbers

Uvinul MC 80, MC 80 N

INCI|CAS: Ethylhexyl Methoxycinnamate | 5466-77-3

Appearance: Colorless to slightly yellow liquid

General: MC 80: Stabilised with BHT
         MC 80 N: Unstabilised

Properties:
- Outstanding purity (patented process)
- Odorless, suitable for perfume-free formulations
- Excellent solvent for other solid UV filters
  (e.g. Uvinul T 150, Uvinul A Plus)
- Freely miscible with cosmetic oils
- World-wide approved

Applications: Skin and sun care products

Uvinul T 150

INCI|CAS: Ethylhexyl Triazone | 88122-99-0

Appearance: White to pale yellow powder

Properties:
- Very high absorptivity
- Excellent photostability
- Soluble in polar cosmetic oils
- Extremely low skin penetration
- Protection against UVB induced immune suppression

Applications: Skin and sun care products
UVB Absorbers

Uvinul N 539 T

INCI|CAS: PEG-25 PABA | 6197-30-4

Appearance: Less yellowish viscous liquid

Properties: SPF boosting in combination with other UVB absorbers (Uvinul MC 80 or Uvinul M 40)

Especially suitable for clear gels

Excellent photostability

Good solvent for other UV filters (e.g. Uvinul A Plus)

Miscible with cosmetic oils

World-wide approved

Applications: Skin and sun care products

Uvinul P 25

INCI|CAS: Octocrylene | 113010-52-9

Appearance: at 50 °C: clear, slightly yellow to brownish yellow, viscous liquid

General: Water-soluble

Properties: Especially suitable for clear gels

Non-ionic

Mild to the skin

Emollient properties

Easy to handle liquid

Applications: Sun care, hair care products, especially suitable for product protection

Uvinul DS 49

INCI|CAS: Benzophenone-9 | 3121-60-6

Appearance: Light yellow powder

General: Water-soluble UV absorber

Applications: Only for product protection
**Z-COTE MAX**

**INCI|CAS:**
Zinc Oxide | 1314-13-2 (and) Dimethoxydiphenylsilane/
Triethoxycaprylylsilane Crosspolymer | 827036-50-0 / 1343-98-2

**Appearance:** Odorless, lipophilic off white powder

**Properties:**
- Unique compatibility with polyacrylate-based thickeners
- Superior formulation flexibility and stability
- Easy to disperse
- UVA-UVB broad-spectrum protection

**Applications:** Suitable for sensitive skin/hypoallergenic formulations

---

**Z-COTE HP 1**

**INCI|CAS:**
Zinc Oxide | 1314-13-2 (and)
Triethoxycaprylylsilane | 2943-75-1

**Appearance:** Hydrophobic white powder

**General:** Surface treated micronized zinc oxide

**Properties:**
- Anti-irritant, especially for sensitive skin
- Strong synergistic effects with Uvinul T 150
- Broadband UV absorption

**Applications:** Suitable for sensitive skin/hypoallergenic formulations

---

**Z-COTE**

**INCI|CAS:**
Zinc Oxide | 1314-13-2

**Appearance:** Amphiphilic white powder

**General:** Uncoated, micronized zinc oxide

**Properties:**
- Anti-irritant, especially for sensitive skin
- Strong synergistic effects with Uvinul T 150
- Broadband UV absorption

**Applications:** Suitable for sensitive skin/hypoallergenic formulations
**T-Lite MAX**

**INCI | CAS:**
- Titanium Dioxide | 13463-67-7 (and)
- Dimethoxydiphenysilane | 827036-50-0 (and)
- Triethoxycaprylylsilane Crosspolymer | 1343-98-2 (and)
- Hydrated Silica (and) Aluminum Hydroxyde | 21645-51-2

**Appearance:** Odorless white, hydrophobic powder

**Properties:**
- Carboner compatible - providing the widest range of formulation possibilities
- Outstanding dispersibility
- Light non-tacky skin feel
- Excellent transparency

**Applications:**
- Specially developed for daily care application
- Suitable for sensitive/hypoallergenic formulations

---

**T-Lite SF**

**INCI | CAS:**
- Titanium Dioxide | 13463-67-7 (and)
- Aluminum Hydroxyde | 21645-51-2 (and)
- Dimethicone/Methicone Copolymer | 68037-59-2

**Appearance:** Odorless white, hydrophobic powder

**Properties:**
- Good dispersibility
- High compatibility with many oils and solvents
- Excellent transparency even at high concentrations (> 8 %)

**Applications:**
- Skin care and sun care
- Suitable for sensitive skin/hypoallergenic formulations

UVinul M 40, UVinul MS 40, UVinul N 539 T, UVinul P 25, UVinul DS 49, UVinul A Plus, UVinul A Plus B

Properties:

- Protection of colorants against fading (particularly the broadband UV absorbers UVinul A Plus B, UVinul M 40 and UVinul MS 40)
- Improvement of the stability of fragrances and active ingredients against oxidation
- Stabilization of the viscosity of gels and shampoos
The skin is exposed every day to various harmful influences such as UV radiation, smog, ozone and dry air. Cosmetic active ingredients and vitamins from BASF put a stop to this, as they deactivate free radicals, slow down the formation of fine lines and wrinkles, retain skin moisture and protect against premature aging of the skin as a result.
skin regeneration

</tr>
</tbody>
</table>

Appearance:

- **Retinol 15 D**: 15% solution of retinol in caprylic/capric triglyceride; stabilised with 1% BHT. Yellowish oil.
- **Retinol 10 S**: 10% solution of retinol in soybean oil; stabilised with BHT. Yellowish oil, from which retinol may crystallize at low temperatures.
- **Retinol 50 C**: 50% blend of retinol and polysorbate 20; stabilised with BHT and BHA. Yellowish oil.
- **RetiSTAR**: 5% solution of retinol in caprylic/capric triglyceride with the optimum combination of sodium ascorbate and tocopherol; provides stable retinol in the emulsion. Yellow liquid dispersion. (see also next page)

General:

Retinol, vitamin A-alcohol, is essential for the growth, development and structural integrity of skin and mucous membranes. It has a positive effect on the formation of new skin cells and thus improves the appearance of the skin; fine lines and wrinkles are smoothened. In addition, it acts against UV-induced skin-aging.

Properties:

- Anti-photoaging, anti-wrinkling agent
- Helps to prevent the UV-induced formation of wrinkles
- Smoothes existing fine lines and wrinkles
- Improves the overall appearance of the skin
- Improves epithelization (thickens the epidermis)
- Normalises keratinization
- Increases mitotic activity
- Improves skin elasticity
- Normalises enzyme activity
- Counters the effects of aging

Applications:

For anti-aging and anti-wrinkles products. Helps to prevent the skin against photoaging.
RetiSTAR – Stabilised Retinol

INCI|CAS: Caprylic/Capric Triglyceride | 65381-09-1 (and)
Sodium Ascorbate | 134-03-2 (and) Tocopherol | 10191-41-0 (and)
Retinol | 68-26-8

Appearance: Yellow liquid dispersion

General: RetiSTAR is an oil dispersion providing stable retinol. It consists of a combination of the vitamins A, C and E that requires no inert gas atmosphere during emulsion preparation or packaging. The optimum combination of sodium ascorbate and tocopherol provides highly stable retinol in your emulsions. It can be added as any other cosmetic ingredient below 50 °C. The packaging should provide a sufficient barrier against oxygen.

Properties: Provides stable retinol in cosmetic emulsions
Requires no inert gas during manufacturing and packaging
Reduces costs of manufacturing
More flexibility for formulations
Improves epithelization (thickens the epidermis)
Normalises keratinization
Increases mitotic activity
Improves skin elasticity
Normalises enzyme activity
Counts the effects of aging

Applications: For anti-aging and anti-wrinkles products. Helps to prevent photoaging of the skin.

Oil-in-water emulsion stored at 40 °C in oxygen-inpermeable packaging

Retinol recovery/%

Unstabilized retinol without inert gas
Unstabilized retinol under argon
RetiSTAR (without inert gas)
## Vitamin A Esters

### INCI|CAS:

- **Vitamin A Palmitate 1.7 mio. IU/g**  
  Retinyl Palmitate | 79-81-2

- **Vitamin A Palmitate 1.0 mio. IU/g**  
  Retinyl Palmitate | 79-81-2 (and)  
  Sunflower (Helianthus Annuus) Seed Oil | 8001-21-6

- **Vitamin A Acetate 1.5 mio. IU/g**  
  Retinyl Acetate | 127-47-9 (and)  
  Sunflower (Helianthus Annuus) Seed Oil | 8001-21-6

### Appearance:

At room temperature, a viscous yellow oil, from which vitamin A esters can partially crystallize. Vitamin A acetate 1.5 mio. IU/g and vitamin A palmitate 1.0 mio. IU/g are adjusted by adding pharmaceutical grade sunflower seed oil. Insoluble in water. Soluble in hydrocarbons, ethers, fats and oils. In aqueous-alcoholic preparations, the use of solubilizers (e.g. Cremophor RH 40 or Cremophor CO 40) is necessary.

### General:

Vitamin A esters are used in skin care products especially in facial products, for the improvement of the general skin texture.

- **Vitamin A palmitate 1.7 mio. IU/g**
  3 different versions: unstabilised, stabilised with tocopherol and BHT.

- **Vitamin A palmitate 1.0 mio. IU/g**
  2 different versions: stabilised with tocopherol and BHT.

- **Vitamin A palmitate 1.5 mio. IU/g**
  only stabilised with BHT.

### Properties:

- Improves epithelization (thickens the epidermis)
- Normalises keratinization
- Increases mitotic activity
- Improves skin elasticity
- Normalises enzyme activity
- Counters the effects of aging

### Applications:

For cosmetic oils and emulsions (creams, lotions, body milk, gels, etc.) as well as other preparations (lipsticks, masks, etc.). All forms of vitamin A esters require adequate stabilisation in cosmetic preparations. This can be best achieved by using inert gas and oxygen-impermeable packaging.
# Vitamin E Grades

<th>Vitamin E</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tocopherol</td>
<td>10191-41-0</td>
<td></td>
</tr>
<tr>
<td>Vitamin E acetate</td>
<td>Tocopheryl Acetate</td>
<td>7695-91-2</td>
</tr>
</tbody>
</table>

## Appearance:
Colorless or yellow to brown, viscous, practically odorless oils. Soluble in hydrocarbons, alcohols, fats and oils; insoluble in water. In aqueous and aqueous-alcoholic preparations (toners, gels etc.), solubilizers, such as Cremophor RH 40 or Cremorphor CO 40, are necessary.

## General:
Vitamin E is frequently used as a cosmetic antioxidant. Tocopherol is sensitive to light and air. It can be used to stabilize cosmetic formulations. In cosmetic preparations, it is possible to increase the antioxidizing effect by combination with complexing agents (such as citric acid). Tocopheryl acetate is more stable than tocopherol. It is used for the protection of skin. It is cleaved in the skin enzymatically to tocopherol. In order to guarantee vitamin efficiency on the skin tocopheryl acetate is primarily used.

<td>Has an anti-inflammatory effect</td>
</tr>
<tr>
<td>Increases the moisture-retaining ability of the epidermis</td>
</tr>
<tr>
<td>Improves the skin’s surface relief and feel (softness, suppleness)</td>
</tr>
</tbody>
</table>

## Applications:
For the use in cosmetic emulsions, such as sunscreen preparations, body lotions, hand creams, body creams, day and night facial creams, multi-vitamin creams. Also in skin oils or decorative cosmetics (lip care sticks, mascara, eyeshadow, blusher, powder, make-up).
Sodium Ascorbyl Phosphate

**INCI|CAS:** Sodium Ascorbyl Phosphate | 66170-10-3

**Appearance:** White to pale beige powder with practically no odor. At least 45% vitamin C content (HPLC). Extremely soluble in water (high dissolution rate).

**General:** Sodium Ascorbyl Phosphate is a stable vitamin C derivative for use in high-activity skin care products. In the skin vitamin C is released by enzymatic cleavage.

**Properties:**
- **Antioxidant** – protects skin cells and extracellular matrix: as a reductive substance, vitamin C can capture aggressive oxidants and free radicals in the skin and deactivate them.
- **Collagen booster** – promotes skin elasticity
- **Skin lightening** – inhibits melamin formation
  Vitamin C is able to suppress pigmentation of the skin and decrease melanin formation. It thus prevents the formation of freckles, moles and age spots.
- **Synergistic anti-oxidant effect with vitamin E acetate**

**Applications:** Any kind of skin care products: creams, lotions, gels, etc. – daily care products, preparations to protect against sunburn, care products to protect against everyday environmental influences, preparations to lighten the skin, cosmetics to conceal freckles and age spots, vitamin creams.

**Stability of Sodium Ascorbyl Phosphate in different formulations at 20 °C, pH 6.5:**

When the formulations were kept at 40 °C, they became discolored after about 2 months, and assumed a pale beige color. Finished product should therefore be stored at temperatures below 25 °C.
### Panthenol Grades (Pro Vit. B₅)

#### INCI|CAS:

<table>
<thead>
<tr>
<th>Description</th>
<th>INCI</th>
<th>CAS</th>
</tr>
</thead>
<tbody>
<tr>
<td>D-Panthenol, USP</td>
<td>Panthenol</td>
<td>81-13-0</td>

</tr>
<tr>
<td>D-Panthenol 75 W</td>
<td>Panthenol</td>
<td>81-13-0 (and) Water</td>
</tr>
</tbody>
</table>

#### Appearance:

- **D-Panthenol, USP:**
  - Colorless, clear, somewhat hygroscopic liquid with high viscosity (may solidify on prolonged storage)
- **D-Panthenol 50 P:**
  - Colorless, clear liquid with low viscosity (50% D-Panthenol solution in 1,2-propylene glycol)
- **D-Panthenol 75 W:**
  - Clear liquid (75% D-Panthenol solution in water, stabilized with citric acid)

#### General:

D-panthenol is the provitamin of D-pantothenic acid (vitamin B₅). D-pantothenic acid plays a key role in the human body. It is part of the coenzyme A which is important for the structure and function of living tissue, for the resistance of mucous membranes as well as for growth and pigmentation of hair. Deficiency of vitamin B₅ results in diverse dermatological disorders.

Because of its physical properties, it can easily be incorporated into all customary cosmetic formulations. It penetrates into both skin and hair to a high degree where it exerts the effects required by manufacturers and consumers. Compared with pantothenic acid, D-panthenol has improved stability, in particular in liquid formulations. Panthenol is readily soluble in water, ethanol and 1,2-propylene glycol and is insoluble in oils and fats. It is stable at room temperature and stable against light and air. Above 70 °C, partial racemization and cleavage to aminopropanol occurs. Recommended pH range: 4 – 8.
Properties:

Skin care
- Prevents vitamin B5 deficiency
- Improves and increases the moisture-retaining ability of the skin (long lasting moisturizer)
- Dry skin remains supple and elastic
- Improves wound healing (alleviates skin irritation and redness; minor wounds, skin grazes and bruises heal more quickly)
- Stimulates epithelization and pigmentation
- Improves normal keratinization of the skin

Hair care*
- Imparts elasticity, shine and long lasting moisture to the hair
- Reduces split ends
- Improves the condition of damaged hair (e.g. caused by washing and brushing)
- Prevents the hair from drying out
- Improves the combability of the hair

Applications:
Ideal for use in modern skin care products, such as sunscreen preparations, after sun products, skin creams for daily use, night creams, multi-vitamin creams, body lotions, gels; it is as well ideal for use in modern haircare products, such as hair sprays, hair-setting products, hair mousses, hair rinses and shampoos.

*please see additional benefits in combination with Luviquat Supreme at page 26
Active Ingredients and Vitamins

Bisabolol Grades

Products: Bisabolol rac.
Bisabolol nat.

INCI|CAS: Bisabolol | 515-69-5

Appearance: Clear, colorless to slightly yellowish liquids, mild floral and slightly sweet odor.

General: Soluble in ethanol and isopropanol, in natural, mineral and synthetic fats and oils. Insoluble in water and glycerol (solubilizers, such as Cremophor RH 40 or Cremophor CO 40 and Luviquat Mono CP or Luviquat Mono LS can be used to prepare clear, aqueous solutions). Bisabolol rac. is of synthetic origin. It contains the four isomers of alpha-Bisabolol, which all occur in nature. Bisabolol nat. is obtained from natural raw material. The major isomer is (–)-alpha-Bisabolol which is the active principle of the traditional medical plant chamomile (Matricaria chamomilla).

Properties: Bisabolol has anti-inflammatory and wound-healing properties. It is a preferred active ingredient for protection of the skin against stress.

Applications: Ideal for the prophylaxis and care of sensitive skin, especially for baby and child care products, sunscreens, pre/after-sun products, pre/after-shaves, oral hygiene preparations, toothpastes, shaving creams and foams, and permanent wave products. An investigation into “the anti-inflammatory action of bisabolol”, has shown that both bisabolol grades show a comparable anti-inflammatory effect in the prevention of UV erythema on human skin.

Active Ingredients and Vitamins

actives
With our Cremophor, Pluracare and Jordapon grades we offer a range of surfactants that can be used as emulsifiers, solubilizers and cleansing agents.
Jordapon Grades

INCI | CAS:
Jordapon Cl Prill
Sodium Cocoyl Isethionate | 61789-32-0
Jordapon Cl P
Sodium Cocoyl Isethionate | 61789-32-0

Appearance:
Jordapon Cl Prill
Granular
Jordapon Cl P
Powder

General:
Jordapon Cl Prill and Jordapon Cl P offer the highest available level of actives. Jordapon Cl Prill is a low-dusting granular form, and Jordapon Cl P is a fine particle-size, flowable powder. All the Jordapon surfactant products are environmentally responsible compounds, which are based on purified fatty acids derived from natural coconut oil. The flake forms contain vegetable-based stearic acid. Our manufacturing process produces no hazardous or environmentally threatening by-products, and Jordapon surfactants themselves are completely biodegradable.

Properties:
All Jordapon Grades
- are mild to skin and eyes
- are excellent foamers in hard or soft water
- impart a soft afterfeel to the skin
- have a mild odor
- are based upon fatty acids from natural, renewable coconut oil
- are completely biodegradable
- have limited water solubility
- are available in high-active powder and high-active granular
Pluracare E Grades

INCI|CAS:

Pluracare E 200
PEG-4 | 25322-68-3
Pluracare E 400
PEG-8 | 25322-68-3
Pluracare E 600
PEG-12 | 25322-68-3
Pluracare E 1500 Flakes
PEG-32 | 25322-68-3
Pluracare E 1500 Melt
PEG-32 | 25322-68-3
Pluracare E 4000 Flakes
PEG-90 | 25322-68-3

General:

Pluracare E 200-600 readily dissolve numerous substances that are sparingly soluble in water. For this reason, the liquid Pluracare E grades are primarily used as solvents for liquid preparations. Pluracare E 1500 and 4000 are binders, solubilizers and absorption promoters for substances that are insoluble or sparingly soluble in water, e.g. oil-soluble vitamins. The Pluracare E grades are also used as non-irritating humectants and moisturizers in cosmetic formulations.

Pluracare F 127

INCI|CAS:

Poloxamer 407 | 9003-11-6

General:

Pluracare F 127 is used as a mild surfactant, thickener, gelling agent, coemulsifier and bodying agent in creams and liquid emulsions. Another application is as a solubilizer for certain active ingredients and essential oils in cosmetic formulations.

Due to their good toxicological profile and their low eye irritancy the Pluracare grades are suitable for cleansing applications, and are even used in products for contact lens cleansing.

## Appearance:

| Cremophor CO 40 | Viscous liquid or soft paste |
| Cremophor RH 40 (pharmaceutical grade) | Viscous liquid |
| Cremophor CO 410 | Viscous liquid |
| Cremophor RH 410 (pharmaceutical grade) | Viscous liquid |
| Cremophor CO 455 | Viscous liquid or soft paste |
| Cremophor RH 455 (pharmaceutical grade) | Pale yellow viscous liquid |

## General:

Effective solubilizers which can be used for aqueous or aqueous-alcoholic solutions which are enriched with fragrances or essential oils. Also effective in making products which may be improved by the addition of hydrophobic vitamins or speciality active ingredients. Cremophor CO 410 and CO 455 are also suitable as co-emulsifiers for formulating emulsions prepared without heat; this can result in a more cost-effective and time-saving production.

## Properties:

- Effective in low concentrations
- Easy to handle
- Can also be used as a co-emulsifier (stabilizing effect)
- Manufactured, filled and analysed to GMP-conditions
- All ingredients are plant-derived or from a synthetic source
Emulsifiers

**INCI | CAS::**

- **Cremophor A 6:** Ceteareth-6 (and) Stearyl Alcohol | 68439-49-6
- **Cremophor A 25:** Ceteareth-25 | 68439-49-6

**Appearance:**

- **Cremophor A 6:** White wax
- **Cremophor A 25:** White microbeads

**General:**

The O/W emulsifier-“team” of Cremophor A 25/A 6 offers considerable advantages for formulating stable emulsions.

**Properties:**

- Freedom in the choice of oil polarities (nearly unlimited use of a wide variety of different oils)
- Flexibility of viscosity control by varying the concentration of Cremophor A 6. Creams and lotions can be prepared easily.
- Cosmetic brilliance as a result of the white and glossy texture, which this emulsifier combination produces.

**INCI | CAS:**

- **Cremophor WO 7:** PEG-7 Hydrogenated Castor Oil | 61788-85-0

**Appearance:**

Cloudy, slightly yellow, viscous liquid

**General:**

Emulsifier for W/O creams and lotions. Ideal for soft emulsions and low-viscosity body lotions. Also suitable for cold emulsification processes.

**INCI | CAS:**

- **Cremophor GS 32:** Polyglyceryl-3 Distearate | 94423-19-5

**Appearance:**

White powder

**General:**

PEG-free emulsifier for O/W creams and lotions, especially for the use in sunscreen preparations and hypoallergenic cosmetic products.

**Emulsion type:**

Effect Pigments

With the acquisition of Engelhard, we now provide a complete line of special effect pigments that add extraordinary visual impact and a look worthy of truly innovative cosmetic and personal care products.

Whether adding opalescence to lipstick or shampoo, or dramatic shimmer to nail polish or body lotions, our effect pigments create looks ranging from soft luster to brilliant sparkle. These novel products can also add complex color, visual depth and dimensionality to your products.

For more information on our broad range of effect pigments, please contact us at the toll free phone number 00800 2273 4444.
BASF offers thickeners, emollients, neutralizers and solvents, which are used in almost all cosmetic applications and form an indispensable part of the final formulation.
### Luvigel EM

**INCI|CAS:** Caprylic/Capric Triglyceride (and) Sodium Acrylates Copolymer | 65381-09-1, 73398-61-5, 9033-79-8

**Appearance:** Water in oil emulsion

**General:** Luvigel EM is a pre-neutralized crosslinked sodium acrylates copolymer that does not require pre-swelling, and can be used in emulsions for fast viscosity build-up. Composition: 23 – 27 % polymer content, 49 – 52 % water and oil ad 100.

**Properties:**
- Saves manufacturing time/Eliminates the need for pre-swelling
- Readily pourable into formulation at any stage
- Allows post-addition for viscosity adjustments
- Easy to handle – no dusting
- Not shear sensitive

**Applications:** Luvigel EM is recommended as thickening agent in
- skin care: O/W emulsions, creams, lotions
- hair care: pomades, alternative styling aids and aqueous gels (non clear)
Recommended usage: 0.1 to 1.0 % polymer

### Luvitol EHO

**INCI|CAS:** Cetearyl Octanoate | N/A

**Appearance:** Clear, colorless oil

**General:** Luvitol EHO is easy to emulsify, improves the spreadability of cosmetic emulsions, softens and smoothenes the skin.

### Luviform FA 139

**Chemical description:** Copolymer of methylvinylether and maleic acid, approx. 26 % in water

**INCI|CAS:** PVM/MA Copolymer | 9011-16-9

**Appearance:** Clear, yellowish viscous liquid

**General:** Luviform FA 139 can be used in a wide range of cosmetic applications as binder, complexing agent, adhesive, film former etc.
1,2-Propylene Glycol Care

**INCI|CAS:** Propylene Glycol | 57-55-6

**General:** Water-miscible, odorless solvent of low volatility and very high purity. Particularly suitable for cosmetic applications.

Dipropylene Glycol Care

**INCI|CAS:** Dipropylene Glycol | 25265-71-8

**General:** Low volatility, water-miscible solvent and moisture-retaining agent for cosmetic applications.

n-Propanol purest

**INCI|CAS:** Propyl Alcohol | 71-23-8

**General:** Moderately volatile, polar solvent of very high purity with a mild odor, especially suitable for cosmetic applications.
Monoethanolamine Care

INCI | CAS: Ethanolamine | 141-43-5

General: The product conforms to the requirements of the EU Cosmetics Regulations. Colorless liquid with a slightly amine like odor, suitable for cosmetic applications and especially for hair colors and formulations that accept higher pH values.

Triethanolamine Grades

INCI | CAS: Triethanolamine Care
Triethanolamine 90% Care (contains approx. 10% water)
INCI: Triethanolamine | 102-71-6

General: Triethanolamine Care and Triethanolamine 90% Care surpass the European requirements for diethanolamine content and nitrosamine content. Almost colorless liquids, miscible with water and alcohols. Widely used neutralizing agent for skin and hair care preparations. Especially for the gel production used to neutralize polyacrylic acid (Carbomer).

Neutrol TE

INCI | CAS: Tetrahydroxypropyl Ethylenediamine | 102-60-3

Appearance: Clear, viscous, almost odorless liquid

General: Neutrol TE is recommended as neutralization agent, especially for carbomer based gels.

Gels formulated with Neutrol TE feature high alcohol compatibility and stimulate a pleasant, non-sticky sensation on the skin. It has been demonstrated that the tendency of Neutrol TE to form nitrosamines is significantly lower than other commonly used amine containing neutralization agents.
Edeta B Grades

General:

The Edeta B grades are aminocarboxylic acids with six functional groups whose characteristic reactions enable them to form complexes. They sequester undesirable metal ions in cosmetic preparations, thus protecting against metal ion catalysed oxidation of lipids and colorants, and preventing from precipitation of the salts, which are responsible for water hardness.

Edeta BD and Edeta BS represent the grades with the lowest formaldehyde level.

Note

The data submitted in this publication are based on our current knowledge and experience. They do not constitute a guarantee in the legal sense of the term and, in view of the manifold factors that may affect processing and application, do not relieve processors of the responsibility of carrying out their own tests and experiments. Cosmetic Solutions

Our assortment of cosmetic ingredients comprises UV filters, active ingredients, cosmetic polymers and effect pigments. With that range of high quality products we are the partner to the cosmetic industry in the areas of skin and sun care, hair and oral care as well as color cosmetics. On top of our cosmetic ingredients we are offering a comprehensive range of aroma chemicals which are used by the Flavor & Fragrance industry amongst others in the manufacture of fragrance compounds for cosmetics, detergents and household cleansing products.

No warranties are made that the formulation example may be used without infringing the intellectual property rights of third parties. In any case, it lies within the responsibility of the user to examine the respective patent situation.
